Deliverable 1

Problem Statement:

Identify relevant data sources from where a filetype information (as described above) can be extracted based on filename or file extension. List at least 5 relevant sources and explain the rationale on why it should be used.

Identified Data Sources

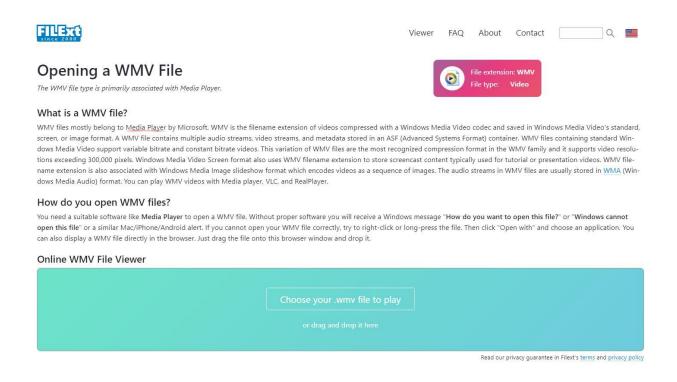

- 1. File Ext website
- 2. File Info website
- 3. metadata2go.com website
- 4. CheckFileType
- 5. Detectfiletype website
- 6. Cryer
- 7. Webopedia Website
- 8. Htmlstrip
- 9. File Stack website

File Ext website:

FILExt is one of the oldest and most respected collections of file formats and file extensions. Over the past 20 years, more than 50 million users have found the right information and tools to open any file on their computer or smartphone. Our knowledge gathered during this period is regularly reviewed and updated. Tom Simondi first provided this information in 2000 as a free online resource for the Internet community.

Preview:

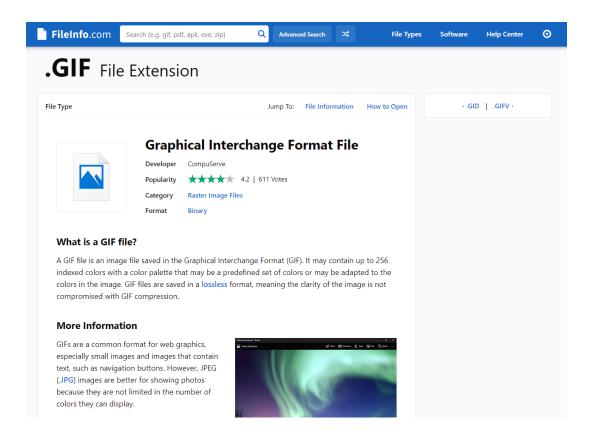

File Info website:

This website, founded in 2005, has been constantly working with developers to create a central file extensions registry. This website has become an authoritative website where developers can submit new file extensions and provide information about file types. Presently it has more than 10000 file extensions with detailed information about the associated file types.

We can scrape data from file Info Website to get all the necessary data related to a file extension. Data which could be scrapped or crawled from this website Link: https://fileinfo.com/browse/

Metadata2go.com website:

Metadata2Go.com is a free online tool that allows you to access the hidden exif & meta data of your files.

Just drag & drop or upload an image, document, video, audio or even ebook file. We will show you all metadata hidden inside the file! No matter if image metadata, document information or video exif – we check your file for you!

Metadata is, basically, information about other data.

Many files contain extra or even hidden data other than the visual data you see at first glance. E-books, photographs, movies, music and even documents can contain data that you don't see at first glance.

CheckFileType Online - 100% Free & Secure

Determine any file type, file extension, and MIME type based on the file contents

Check out the latest file types detected . Check a File Type

Get Free API Acess by doing any of the following:

1) Link to CheckFiletype.com

If you place a link on a reputable blog, website or forum we will give you API access up to 100 API calls per day. Copy and Paste the following code:

Online File Type Checker

2) Write an article about CheckFiletype.com

Write a blog post or article about CheckFileType.com and earn 300 API calls per day

3) Make a video tutorial about CheckFileType.com>

Once your video is live and on a well visited website we will give you 300 API calls per day.

Once your link, video, or article is ready contact us at api [at] checkfiletype.com

Detectfiletype website:

Detectfiletype.com is an online file type detector to determine the true file type based on the file contents, not the extension. For example, just because your file is named "file.doc" it doesn't necessarily mean it's a Word document. It could be any type of file that just has an incorrect extension.

The extension of a file can be misleading since its simply part of the name of the file. If you take an ".gif" file and rename it to ".doc" your operating system can be confused on which application should open the document.

DetectFileType allows you to upload a file and analyze the bits and bytes of it to tell you what is the true filetype of your document.

DetectFileType.com SUCCESS

The file type is:

File Type: PDF document, version 1.7 (Lepton 2.x), scale 52188-15457, spot sensor temperature 44974043136.000000, color scheme 195, minimum point enabled, maximum point enabled, calibration: offset 0.000000, slope -0.000000 - data

MIME Type: application/pdf; Suggested file extension(s): pdf

Insepect Another File

Cryer website:

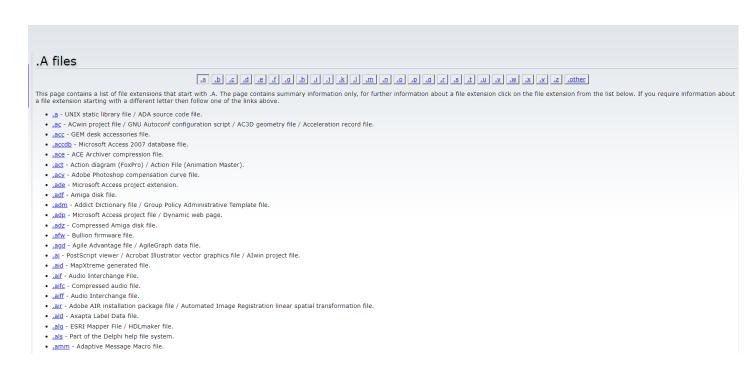

Cryer This list of file types sets out to answer the common question "What is a file of type .x?" or "What is that file extension for?"

A file type is denoted by those letters that follow the last dot in a file name. These letters denote the type of file, and are also commonly known as a file extension. On Windows PCs the file extension may be hidden by Windows, but is still part of the file name.

This list of file types contains a list of file extensions together with a brief description of the type of file that the extension is associated with. Where known, relevant links to external resources are also provided for each file type, such as file format information and applications that can open and work with each file type.

Preview:

Webopedia website:

Webopedia is an online tech Dictionary for IT professionals, educators and students which provides definitions to words, phrases and abbreviations related to computing and information technology. So this website is one of the source to find some short description about a given file extension. But its worth noting that this website may not be updated frequently and has very less number of file extensions

Htmlstrip:

Htmlstrip is a handy tool to check what type of file you are dealing with by checking the Multipurpose Internet Mail Extension. This is especially useful for developers who are working on validation and want to know if the file MIME type being tested does indeed match the one being validated against. It takes your upload and stores a temporary file, which is then inspected to see what the MIME type is. It does not rely on the file extension to complete the task. All files uploaded via the https protocol and are immediately deleted after inspection. Max file upload size: 50MB (this can be raised).
